MOTOHELP
PRIVATE LIMITED

As discussed, we are pleased to submit the preliminary details for the proposed **Supply Chain Management Software Development Project**. The objective of the project is to develop an integrated software solution to streamline procurement, inventory, warehouse, order processing, logistics, supplier management, and reporting activities.

1. Project Abstract

The proposed Supply Chain Management Software will provide a centralized platform for managing and monitoring the complete supply chain process. The system will help organizations improve operational efficiency, reduce manual work, maintain accurate inventory records, monitor purchase and sales orders, manage suppliers, track logistics, and generate real-time management reports.

The software will be designed with a scalable and user-friendly architecture so that it can be customized according to the organization's business processes and future requirements.

2. Project Deliverables

The proposed project will include the following major modules:

- User Login, Roles & Access Control
- Company/Branch & Master Management
- Customer and Supplier Management
- Product/Item Master Management
- Purchase Requisition and Purchase Order
- Goods Receipt / Material Receipt
- Inventory and Stock Management
- Warehouse Management
- Stock Transfer and Adjustment
- Sales Order Management
- Dispatch and Delivery Management
- Logistics and Shipment Tracking
- Vendor/Supplier Performance Management
- Invoice and Payment Tracking
- Purchase and Sales Reports
- Inventory and Stock Reports
- MIS and Management Dashboard
- Notifications and Alerts
- Audit Trail and Transaction History
- Data Backup and Security
- API Integration, wherever required
- User Manual and System Documentation
- Software Testing and User Acceptance Support
- Deployment and Production Setup
- Training and Knowledge Transfer

3. Required Facilities / Infrastructure

For successful development, implementation, and operation of the software, the following facilities may be required:

- Cloud server or dedicated on-premise server
- Domain and SSL certificate
- Database server
- Reliable internet connectivity
- Computers/Laptops for authorized users
- Barcode scanners, printers, or other hardware, if required
- Backup storage facility
- Email/SMS/WhatsApp/Payment gateway, if required
- Existing ERP/accounting/API integration details, if applicable
- Access to required business process documents and master data
- Dedicated client-side coordinator for requirement validation and testing

4. Knowledge Areas Required

The project development team should have knowledge and experience in:

- Fronted technology & Backed
- Angular/React js
- Flutter/React Native
- Ms Sql / No Sql
- Database Design and Management
- Web/Application Development
- API and Third-Party Integration
- Cloud/Server Deployment
- Cyber security and User Access Management
- Reporting and Business Intelligence
- Software Testing and Quality Assurance
- Data Migration and Backup Management
- Project Management and User Training

5. Estimated Budget

The preliminary estimated budget for development and implementation of the Supply Chain Management Software is:

.

6. Proposed Development Process

The project can be executed through the following stages:

1. Requirement Gathering & Business Process Study
2. System Analysis & Solution Design
3. UI/UX Design
4. Software Development
5. Module-wise Testing
6. Client Review & User Acceptance Testing
7. Data Migration, if required
8. Deployment & Go-Live
9. User Training
10. Post-Implementation Support
